

Lightweight Chandelier

The Lightweight chandelier solution can be described as „an organic beast“ - the lighting solution gets absolutely new appearance when moving and replacing the parts of the chandelier. Even changing the angle of the Lightweight element has an influence on the appearance of the chandelier because of the cables which are connected with the lighting elements. The construction of the chandelier has up to three

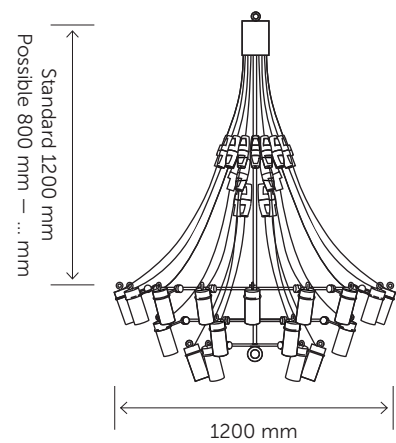

levels. The details are made of metal. It is possible to create chandeliers with 8, 16, 24 or 32 lighting elements when combining various levels of the construction. The stand of the Lightweight consists of gradual and threaded rods. This means that you can regulate the length of the hole stand. It is possible to manufacture custom-made versions with more levels and with more lighting elements.

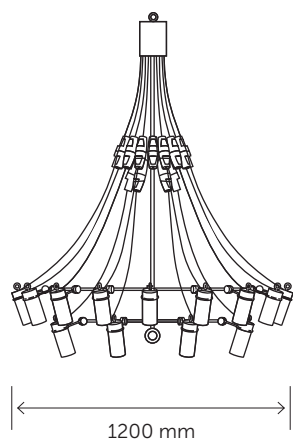

- Recommended lighting source Led Star Par16
