

CORAL

Designed by Margus Triibmann (Keha3)

The inspiration for our captivating harbor service pedestal comes from peculiar marine invertebrates, corals. The unusual form allows us to create many different configurations. Multiple service hatches and power outlets can be mounted – depending on the requirements.

The body of the service pedestal is made from durable polyethylene plastic and is semi transparent to light. The latter allows us to turn this piece of functional hardware into a lighting fixture that adds aesthetic and sculptural value to the environment.

Service hatch – Multiple service hatches allow access to LED elements (LED lamps with E27 socket).

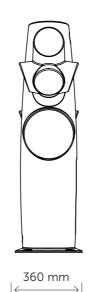

Electric outlet - Up to 6 electric sockets. Different types of sockets can be installed – based on client 's request. From 16A to 125A. Sockets are rated IP67.

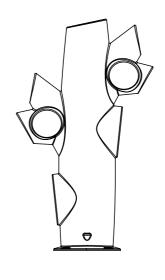

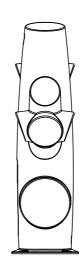

Main service hatch – Main service hatch is made from transparent plastic. Used for visual inspection of the fuses as well as maintenance works.

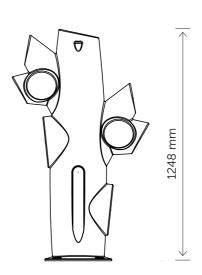

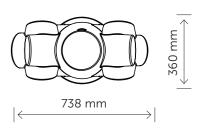

Water tap – Water tap is located at the base of the service pedestal. Water piping is kept in a separate structure from elecronics.

Item code	Outlets	Water	Optional
