

# RIBA ACOUSTIC

Design M. Triibmann, Kard Männil

Acoustic lights have a strong influence on the acoustic comfort and properties of a room when defining sound behavior and the function of the space. For optimum speech intelligibility, one needs to exploit the reflection of sound on walls, floors, and ceilings. In most cases, preferable solution is to reduce the reflections to create a more private and intimate atmosphere.

An acoustic lamp Riba is a huge interior lighting that is modular, user-friendly and playful. As the stripes used in the luminaire's construction are made out of synthetic felt, the lamp muffles bleak tones. The felt stripes are fixed to the metal construction and are easily movable. Therefore, it is possible to make the lighting look either symmetrical or disordered. With our lights made of felt tiles, we are able to help you with your acoustic demand and meet the aural needs of the room.

<b>Product code</b>	<b>K3-LI-ACST-1400</b>	<b>K3-LI-ACST-2000</b>
<b>Usage capacity</b>	<b>4x9W / 6X9W</b> recommended source PARATHOM PAR30	<b>4x9W / 6X9W</b> recommended source PARATHOM PAR30
<b>Lightsources socket</b>	<b>E27</b>	<b>E27</b>
<b>Input voltage</b>	<b>230V</b>	<b>230V</b>
<b>Energy class</b>	<b>A+</b>	<b>A+</b>
<b>Protection class (IP)</b>	<b>20</b>	<b>20</b>
<b>Weight</b>	<b>20 kg</b>	<b>30 kg</b>

<b>Material</b>	Frame - steel
<b>Colour</b>	Dark gray syntetic felt, available other colours

\*The other dimensions are available on request
