

# Vinkel

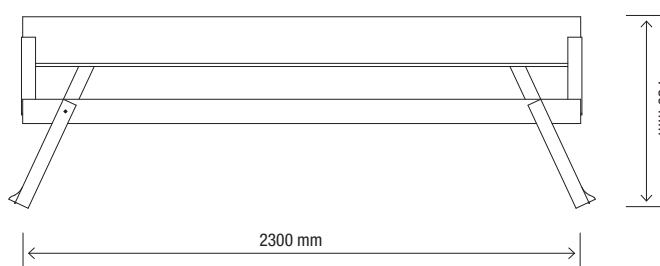

**V** The bench's durable and ergonomic design represents both modernity and traditions where by right bending techniques the profiled steel is used to manufacture the bench's legs and back in one piece. The angle iron's and the wooden part's tenons ensure full stability to the bench. It is possible to easily integrate suitable armrests to "Vinkel" bench. The metal leg manufactured by minimalistic metal processing techniques along with the massive wooden part make up a strong stable outdoor bench to which only the time can play a fatal role.
